ResumAI — Phase 2 Session Handoff

Paste this at the start of every Claude Code session

CURRENT STATE (as of end of Phase 2 Day 1)

What's working

- Next.js 16 app running at localhost:3000
- All 6 nav routes rendering: Home, Dashboard, Positioning, Opportunities, CRM, Interview
- Clerk auth working
- Supabase connected with all 11 tables
- Claude API working (model: claude-sonnet-4-6, env-driven)
- /api/rewrite fires and returns rewritten content
- /api/analyze-roles generates 5-8 structured role recommendations
- Role selection UI working — user picks from AI-generated roles
- Rewrite buttons wired to selectedRole (structured object)
- End-to-end pipeline functional: Resume → analyze-roles → select → rewrite

Architecture (DO NOT CHANGE)

```
Frontend state:
  roleRecommendations[]   ← populated by /api/analyze-roles
  selectedRole            ← structured object {title, context, traits, reasoning}
  isAnalyzingRoles        ← loading state

Flow:
  Resume loads → analyze-roles runs → recommendations render
  → user selects role → rewrite fires with selectedRole
```

Files that matter most

```
src/app/positioning/page.tsx      ← main UI, role selection, rewrite flow
src/app/api/rewrite/route.ts      ← Claude rewrite endpoint
src/app/api/analyze-roles/route.ts ← role recommendation endpoint
src/lib/anthropic.ts              ← Claude client, MODEL constant, prompt builders
```

```
src/lib/upstash.ts                ← conditional Upstash (passthrough if not
configured)
```

KNOWN FIXES ALREADY APPLIED (confirm these are in the files)

1. **src/lib/anthropic.ts** — MODEL uses env var:

```typescript
export const MODEL = process.env.ANTHROPIC_MODEL?.trim() || "claude-sonnet-4-6";
```

2. **src/app/api/rewrite/route.ts** — empty response handled loudly:

```typescript
const text = message.content
  .filter((b) => b.type === "text")
  .map((b) => b.text)
  .join("\n")
  .trim();
if (!text) {
  return NextResponse.json({ error: "Anthropic returned an empty response" }, { s
}
return NextResponse.json({ text });
```

3. **src/lib/upstash.ts** — conditional Upstash:

```typescript
const upstashEnabled = !!process.env.UPSTASH_REDIS_REST_URL && !!process.env.UPST
// passThroughLimiter used when disabled
```

4. **src/app/positioning/page.tsx** — proper error surfacing:

```typescript
```

```
    if (!res.ok) throw new Error(data?.error || `Rewrite failed (${res.status})`);
    const text = typeof data.text === "string" ? data.text : typeof data.rewrite ===
    if (!text.trim()) throw new Error("Rewrite API returned an empty text payload");
```

5. **.env.local** — model override:

```
ANTHROPIC_MODEL=claude-sonnet-4-6
```

CURRENT GAP — THE NEXT MAJOR QUALITY UNLOCK

Problem

`/api/rewrite` still uses a generic prompt that doesn't fully consume the structured role object. Output is wordy and generic.

Structured role object shape

```typescript
{
  title: string,      // e.g. "Director of Strategic Partnerships"
  context: string,    // e.g. "Databricks — AI/data platform, Series G, enterprise s
  traits: string[],   // e.g. ["channel partnership development", "enterprise deal c
  reasoning: string   // e.g. "Marc's AVEVA channel background maps directly to Data
}
```

Goal

Rewrite output should feel like a targeted, job-specific resume — not a generic rewrite.

NEXT TASKS (do in this exact order)

Task 1 — Confirm all fixes are in local files

Read these four files and verify the fixes above are present.
If any are missing, apply them before proceeding.

- src/lib/anthropic.ts
- src/app/api/rewrite/route.ts

- src/lib/upstash.ts
- src/app/positioning/page.tsx

Task 2 — Update /api/rewrite request validation

The route currently accepts targetRole as a string.
Update it to accept structured role object:

```typescript
const { section, targetRole, analytics, scoreData } = await req.json();
// targetRole can be string OR structured object
// handle both for backwards compatibility
const roleContext = typeof targetRole === "object"
  ? `${targetRole.title} at ${targetRole.context}`
  : targetRole;
const roleTraits = typeof targetRole === "object" ? targetRole.traits : [];
const roleReasoning = typeof targetRole === "object" ? targetRole.reasoning : "";
```

Task 3 — Upgrade rewrite prompt in src/lib/anthropic.ts

Replace buildRewritePrompt with this structure:

You are a senior resume writer specializing in enterprise tech sales career positioning.
Your job is to rewrite one resume section so it reads like it was written specifically
for this role — not adapted from a generic resume.

CANDIDATE: Marc Lehrmann
- 10+ years enterprise tech sales, $25M+ career revenue
- Background: AVEVA (SCADA/HMI/PI System/IIoT), Transcend Information, Dexxxon Digital Storage, Advantech USA, Radeus Labs
- Positioning: "OT to AI bridge" — industrial enterprise credibility meets AI/data platform fluency
- Building 7 apps actively (Next.js, Supabase, Claude API)

TARGET ROLE: {roleTitle}
COMPANY/CONTEXT: {roleContext}
WHY MARC FITS: {roleReasoning}
KEY TRAITS NEEDED: {roleTraits joined as comma list}

SECTION TO REWRITE: {section.title}
CURRENT CONTENT:
{section.content}

PERFORMANCE DATA:
- Score: {scoreData.score}/100
- Issues: {scoreData.issues}
- Scroll reach: {analytics data}

REWRITE RULES:
1. Every bullet must open with an outcome, not an activity
2. Reference at least 2 of the key traits naturally in the content
3. For Experience: max 3 bullets per role, lead with biggest revenue/impact number
4. For Narrative: write as if speaking directly to a hiring manager at {company}. Under 180 words.
5. For Skills: only include skills that map to the key traits list. Cut everything else.
6. For CTA: name the role title and company specifically.
7. Confident, direct tone. No hedging. No "I am passionate about" language.

GUARDRAILS — never break these:
- No invented metrics, companies, or titles
- Preserve all dates exactly as given
- Every claim must be traceable to the original content

```
- Do not add roles or experiences that don't exist

Return ONLY the rewritten section text.
No preamble, no labels, no explanation.
```

Task 4 — Confirm accepted rewrites save to Supabase

After a rewrite is accepted, verify it saves to resume_versions table.
If not wired, add the save call.

Task 5 — Test end to end

Test with:

- Role: Director of Strategic Partnerships at Databricks
- Section: Experience
- Section: OT-to-AI Narrative

Output should be tight, specific, and clearly written for Databricks — not generic.

Task 6 — Commit

```bash
git add .
git commit -m "Phase 2: structured role rewrites, upgraded prompt, Supabase persiste
git push
```

DESIGN SYSTEM REMINDER

- Navy `#2C3E50`, white `#FFFFFF`, off-white `#F5F5F3`
- Raleway headings, Open Sans body
- NO border-radius anywhere — sharp corners throughout
- Do not change any existing UI

CANDIDATE RESUME (source of truth for all Claude prompts)

Marc Lehrmann — Southern California mlehr001@gmail.com | 909-573-5840 | linkedin.com/in/marclehrmann | github.com/mlehr001

EXPERIENCE:

- AVEVA Select CA, Assistant Sales Manager, 2018–Present California-exclusive AVEVA distributor. SCADA, HMI, PI System, IIoT. Enterprise + municipal. Energy, water, manufacturing. Multi-stakeholder procurement. Executive/OT/IT trust-building.
- Radeus Labs, Computer Sales Director, Jan 2024–Mar 2024 Ruggedized computing, SATCOM industry. 15% revenue growth. 25% OEM project acquisition increase. 30% new business growth.
- Advantech USA, Sales Development Executive, May 2021–Oct 2023 Arrow Electronics partnership. 15% distribution revenue growth. Pepsi, Philips Healthcare, 7-11 accounts.
- Dexxxon Digital Storage, Key Account Manager, Apr 2020–May 2021 $1.1M annual revenue. 50% revenue increase. $500K new storage project revenue. EMTEC, Kodak, IBM, Quantum, HP brands.
- Transcend Information, Channel Account Manager, Feb 2014–Mar 2020 $1.5M channel revenue via Ingram Micro + TD Synnex. 30% YoY growth. 100% YoY Apple embedded + military body cameras. 500+ reseller partnerships.

EDUCATION: BA Economics, UC Riverside 2012

KEY METRICS: $25M+ distribution revenue, 500+ resellers, 50% YoY growth (Dexxxon)
